

ZUBYTE

Corporate Website — Project & Design Requirements
Website strategy • information architecture • UI/UX • technical direction

Prepared for Zubyte
Service-based IT Solutions Company

Reference visual direction

Reference used for visual feel only: premium contrast, whitespace, modular sections, product visuals and clear CTAs. Zubyte should develop its own brand expression rather than copy the layout.

1. Project Overview

Zubyte is a service-based IT solutions company providing end-to-end technology and digital services. The website will be the company's primary digital presence, built to explain capabilities, establish trust, showcase products/projects and convert visitors into enquiries.

Primary Goals

- Position Zubyte as a modern, capable and trustworthy technology partner.
- Communicate the service offering within a few seconds of landing.
- Show proof through products, projects, process, testimonials and measurable outcomes.
- Create a simple visitor journey: Discover → Understand → Trust → Contact.
- Provide a strong foundation for SEO, AEO, Google Business visibility and digital marketing.

Core Pages

- Home
- About
- Services
- Products
- Contact

2. Zubyte Service Scope

- Web Development and Web Applications
- Mobile Application Development
- Software Development
- UI/UX Design
- Web Design
- Mobile App Design
- Product Design
- SEO
- AEO
- Google Business Profile Management
- Digital Marketing
- Deployment
- Cloud Solutions
- CI/CD
- DevOps

3. Brand & Positioning Direction

The site should feel like a premium technology product while clearly communicating that Zubyte is a service partner.

Attribute	Desired feeling	Design translation
Modern	Current and technology-focused	Contemporary typography, refined cards, subtle motion
Premium	High quality and trustworthy	Whitespace, hierarchy, restrained effects
Simple	Easy to understand	Short copy, clear navigation, focused CTAs
Technical	Competent and capable	Product UI, architecture visuals, metrics
Human	Approachable and collaborative	Real people, testimonials, direct language

4. Reference Design Analysis

The attached reference is a benchmark for visual language, not a page-by-page template.

- High-contrast dark hero creates immediate visual impact.
- Alternating dark/light sections create rhythm and content separation.
- Generous whitespace makes the interface feel premium and calm.
- Large headlines communicate the idea before supporting copy.
- Product/interface visuals explain capability faster than long paragraphs.
- Modular sections keep each content block focused.
- Testimonials, metrics, logos and other proof reduce visitor uncertainty.
- Clear CTAs guide the visitor without overwhelming them.

Adapt for Zubyte

- Use the same discipline of contrast, whitespace and hierarchy.
- Use Zubyte's own colors, typography, imagery and components.
- Show real work, products, UI screenshots and case studies whenever possible.
- Use proof-driven storytelling instead of generic IT-company claims.

Avoid

- Exact copying of the reference layout or branding.
- Overuse of gradients, glassmorphism or animation.
- Long homepage paragraphs.
- Too many competing CTAs.
- Generic stock imagery that does not represent Zubyte.

5. UX Requirements

1. The first screen must clearly answer: What is Zubyte and what does it do?
2. Keep navigation simple: Home, About, Services, Products, Contact.
3. Each section should answer one question: What? Why? How? Proof? What next?
4. Use progressive disclosure instead of presenting every detail at once.
5. Keep one consistent primary CTA, such as "Start a Project" or "Talk to Zubyte".

6. Avoid unnecessary popups, interruptions and complex interactions.
7. Design mobile-first while preserving the desktop visual composition.
8. Provide clear hover, focus, active and error states.

6. Information Architecture / Sitemap

- Home
- About
- Services
 - • Web Development • Web Apps • Mobile Apps • Software Development
 - • UI/UX & Product Design • SEO & AEO • Google Business Profile
 - • Digital Marketing • Deployment & Cloud • CI/CD & DevOps
- Products
 - • Product showcase / case studies / product detail pages as the portfolio grows
- Contact
 - • Enquiry form • Direct contact • Business/location information • Social links

7. Page-by-Page Requirements

Home

- Hero with concise positioning statement, primary CTA and strong visual.
- Services snapshot grouped into understandable categories.
- Why Zubyte: 3–5 concrete differentiators.
- Selected products/projects with screenshots or mockups.
- Process: Discover → Design → Build → Deploy → Improve.
- Technology/capability section without an excessive logo wall.
- Testimonials, outcomes, metrics or other trust signals.
- Strong final CTA before footer.

About

- Company story and positioning.
- Mission, vision and values.
- How Zubyte works with clients.
- Team section when professional assets are ready.
- Capabilities and delivery philosophy.

Services

- Overview of all services with logical grouping.
- Each service explains what it is, who it is for, what Zubyte delivers and business value.
- Visual service cards with concise supporting copy.
- Contextual CTA after major service groups.
- SEO-friendly service content and internal linking.

Products

- Showcase Zubyte-built products/platforms.
- Product cards with name, value proposition, visual, category and status.
- Optional detail/case-study pages.
- Story structure: Problem → Solution → Features → Technology → Outcome.

Contact

- Simple project enquiry form.
- Suggested fields: name, company, email, phone (optional), service, project summary, budget/timeline (optional).
- Visible direct contact options.
- Clear success and validation/error states.
- Spam protection and server-side validation.
- Google Business/location information where relevant.

8. Visual Design System

Color & contrast

- Neutral base using white/off-white surfaces with a deep near-black/dark hero or feature sections.
- One primary brand accent for buttons, links and highlights.
- Strong text/background contrast.
- Use dark sections as intentional feature moments rather than making every section dark.

Typography

- One modern sans-serif family with a consistent type scale.
- Large, concise hero headlines.
- Readable body text with comfortable line-height.
- Consistent heading hierarchy across breakpoints.

Layout

- Centered max-width content container.
- Generous vertical spacing.
- Consistent card/grid system.
- Consistent corner-radius language.
- Asymmetry only when it improves storytelling.

Core UI Components

- Header/navigation
- Buttons
- Section headings
- Service cards
- Product cards
- Case-study blocks

- Metric cards
- Testimonials
- FAQ accordion
- Contact form
- Footer

9. Motion & Interaction

- Use subtle reveal/fade/slide transitions.
- Keep hover effects lightweight.
- Avoid scroll-jacking and long loading animations.
- Respect reduced-motion accessibility preferences.
- Animation should support hierarchy and feedback, not compete with content.

10. Responsive Requirements

Device	Focus	Expected behaviour
Desktop	Premium composition	Wide hero, multi-column grids, full navigation
Tablet	Hierarchy preservation	Reduced columns, tighter spacing, simplified media
Mobile	Clarity and speed	Single-column flow, compact navigation, stacked cards, touch-friendly controls

11. Content Strategy

- Write around business outcomes, not only technologies.
- Replace generic claims with specific proof, process or results.
- Keep headlines benefit-oriented and supporting copy concise.
- Use consistent names for services.
- Make content modular so new services/products can be added later.

12. SEO, AEO & Discoverability

- Unique title/meta description for every indexable page.
- Semantic HTML with one clear H1 and logical headings.
- Descriptive URLs and internal linking.
- Service-specific content based on customer search intent.
- Optimized images, alt text and modern formats.
- XML sitemap, robots.txt and canonical URLs.
- Open Graph/social metadata.
- Structured data where appropriate: Organization, WebSite, Service, Product and FAQ.
- AEO-friendly direct answers, definitions and FAQs.
- Consistent business information between the website and Google Business Profile.

13. Performance & Accessibility

- Target excellent Core Web Vitals.
- Optimize hero images/video and lazy-load non-critical media.
- Minimize JavaScript and third-party scripts.
- Use semantic HTML and keyboard navigation.
- Provide visible focus states and sufficient contrast.
- Accessible labels and error messages for forms.
- Cross-browser testing on current Chrome, Safari, Edge and common mobile browsers.

14. Suggested Project Structure

```
zubyte-website/  
  ■■■ public/  
    ■ ■■■ images/  
    ■ ■■■ icons/  
    ■ ■■■ fonts/  
    ■■■ src/  
      ■ ■■■ components/  
        ■ ■ ■■■ layout/  
        ■ ■ ■■■ navigation/  
        ■ ■ ■■■ ui/  
        ■ ■ ■■■ sections/  
        ■ ■ ■■■ forms/  
        ■ ■■■ pages/  
          ■ ■ ■■■ Home  
          ■ ■ ■■■ About  
          ■ ■ ■■■ Services  
          ■ ■ ■■■ Products  
          ■ ■ ■■■ Contact  
        ■ ■■■ data/  
        ■ ■■■ styles/  
        ■ ■■■ utils/  
        ■ ■■■ config/  
        ■■■ tests/  
        ■■■ .env.example  
        ■■■ README.md  
        ■■■ deployment/
```

Component architecture

- Global: Header, Footer, PageContainer.
- UI: Button, Card, Badge, SectionHeading, Icon, Accordion.
- Marketing sections: Hero, ServicesGrid, ProductShowcase, Process, Testimonials, FAQ, CTA.
- Data-driven service/product content where practical.
- Forms with client-side UX and server-side validation.

15. Functional Requirements

- Responsive navigation and mobile menu.
- Working secure contact/enquiry form.
- Client-side UX + server-side validation.
- SEO metadata management.
- Analytics integration.
- 404 page and error handling.

- Product/service data management.
- Optional CMS/admin layer if content needs to be updated by non-developers.

16. Security, Deployment & DevOps

- HTTPS in production.
- Environment variables for secrets/API credentials.
- Rate limiting and abuse protection for public forms.
- Secure headers and dependency maintenance.
- Source-control-based CI/CD pipeline.
- Development/staging/production separation where appropriate.
- Automated lint/test/build checks before deployment.
- Monitoring for uptime, errors and form failures.
- CDN/cache optimization for static assets.

17. Acceptance Criteria

- All five primary pages are complete and responsive.
- Zubyte positioning is immediately understandable.
- All major services are clearly represented.
- Products/projects are showcased professionally.
- Contact form works end-to-end.
- SEO fundamentals and accessibility basics are implemented.
- Performance is optimized.
- Production deployment is verified.
- Domain and SSL are working.
- Analytics is verified.
- No major UI/UX defects remain.

18. Recommended Delivery Phases

Phase	Scope
1 — Discovery	Positioning, audience, service taxonomy, content requirements and conversion goals.
2 — UX / IA	Sitemap, user flows, wireframes and page-level content hierarchy.
3 — Visual Design	Design system, desktop/mobile designs, components and high-fidelity pages.
4 — Development	Reusable components, pages, forms, motion, SEO and responsive behaviour.
5 — Integration	Forms, analytics, CMS/data sources and deployment.
6 — QA	Cross-browser, responsive, accessibility, performance, SEO and functional testing.
7 — Launch	Production deployment, domain/SSL verification, analytics and monitoring.

19. Final Design Direction

Recommended direction: minimal interface + high contrast + strong typography + real product visuals + proof + clear conversion paths.

The attached reference is particularly useful for its visual rhythm: confident dark hero, clean light sections, modular cards, large typography and evidence-driven storytelling. Zubyte should own this language through its own brand identity, case studies, products and service content.
